PROFESSIONAL SUMMARY

Cybersecurity & Digital Forensics student at VIT Bhopal (GPA: 8.54) with a strong foundation in both offensive security and full-stack development. Gained hands-on penetration testing experience through a Red Team internship, and applied secure coding principles — RBAC, JWT, parameterized queries, and input sanitization — across multiple real-world projects including a B2G healthcare platform and a business directory application. Skilled in Python, Java, JavaScript, React.js, and SQL. Actively participating in CTFs and the GFG 160 DSA Challenge. Looking for an entry-level Security Analyst or VAPT role where technical depth meets practical impact.

TECHNICAL SKILLS

- **Cybersecurity:** OWASP Top 10, Network Security, Linux Administration
- **Security Tools:** Burp Suite, Nmap, Wireshark, Metasploit, FTK Imager, John the Ripper, Snort
- **Languages & Scripting:** Python (Automation/Scripting), Java, SQL, JavaScript, TypeScript, Bash
- **Development & Security:** React.js, Node.js, FastAPI, Vite, Tailwind CSS, REST API Security, RBAC, JWT, Secure Coding
- **Certifications:** Google Cybersecurity Certificate (In Progress) | NPTEL Blockchain | TryHackMe – Active Participant

EXPERIENCE

Red Team Intern | Cybersecurity Internship (Remote)

February 2025 – March 2025

- Conducted Vulnerability Assessment and Penetration Testing (VAPT) on simulated environments, identifying and documenting critical misconfigurations and attack vectors.
- Performed exploitation analysis using Metasploit; authored remediation reports with actionable hardening strategies.
- Collaborated with the Blue Team on incident response protocols and threat mitigation playbooks.
- Analyzed network traffic logs using Wireshark to detect anomalous packet signatures and potential lateral movement.

KEY PROJECTS

SwasthaTrack – Pharmaceutical Supply Chain System (B2G) | React.js, FastAPI, PostgreSQL

- Developing a government-focused pharmaceutical tracking platform ensuring data privacy, integrity, and regulatory compliance.
- Implemented Role-Based Access Control (RBAC) and secure JWT authentication to prevent unauthorized access.
- Integrated with ABDM (Ayushman Bharat) APIs for healthcare data interoperability; performed manual source code review to prevent XSS.
- Conducted threat modeling on API endpoints to identify and mitigate injection and broken authentication risks.

MetaDoor – Premium Door Systems Web App (In Progress) | React.js, Node.js, REST API

- Building a high-performance web application featuring a product catalog, interactive door configurator, and user dashboard.
- Implementing secure API communication, input validation, and authenticated user sessions following OWASP secure coding principles.

ListIndia – Business Directory Platform (In Progress) | React, TypeScript, Vite, Tailwind CSS

- Developing a modern business directory supporting listings, reviews, and payment integrations with a focus on scalable architecture.
- Applying secure coding practices including parameterized queries, input sanitization, and XSS prevention throughout the stack.

Secure Student Authentication System – Mess Management Portal | HTML/CSS, JavaScript, SQL

- Built a student verification portal implementing defense-in-depth for user data protection and session integrity.
- Mitigated SQL Injection via parameterized queries; enforced strong password policies and secure session management to prevent hijacking.

EDUCATION

B.Tech in Computer Science – Cybersecurity & Digital Forensics

VIT Bhopal University

2023 – Present

GPA: 8.54 / 10

ACHIEVEMENTS & INTERESTS

- DSA: Solved 100+ Data Structures & Algorithms problems as part of the GFG 160 Challenge (GeeksForGeeks).
- CTF: Active participant in Capture The Flag competitions – PicoCTF, TryHackMe rooms.
- GitHub: Active project maintainer and contributor – github.com/AkshayByte
- Interests: Blockchain Forensics, Zero Trust Architecture, DevSecOps, Open Source Security Tooling.
